

PREFABRICATED PREFINISHED VOLUMETRIC CONSTRUCTION

for Healthcare, Educational, Commercial & Social Housing Projects

NAFFCO is a global leader in manufacturing and supplying top-tier safety and fire building solutions with over 15,000 employees, over 2,000 engineers and more than 6.5 million sq. ft. of manufacturing plants

FOR MASS VOLUME CONSTRUCTION PROJECTS

MODULAR BUILDING SOLUTIONS

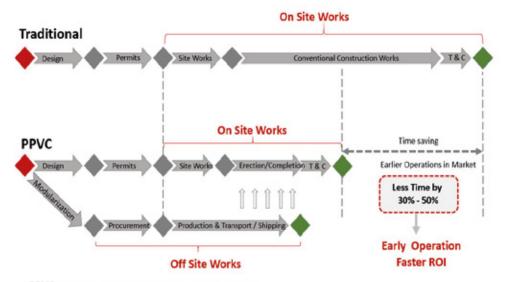

NAFFCO modular units are designed, manufactured under high-quality factory controlled conditions and quickly assembled on site compared to traditional construction and building methods. The modular units are generally customizable and built according to client and project requirements.

NAFFCO'S modular elements such as walls, facade, roofs, doors, firefighting system, etc.... are manufactured with the latest technologies to ensure high-quality consistent products that contribute to efficient and

innovative low-cost modular constructions.

Naffco modular units are freely stackable and can be used for multi-level building designs. The units can be permanent or temporary building structures. Based on requirements, units can be recycled, re-used, or relocated to different sites.

NAFFCO'S modular units are completely fireproof with Class A non-combustible elements such as fire rated ACP panels, fire rated sandwich panels, and fire rated door, etc..., to ensure full safety of the building occupants.

PPVC: Prefabricated Prefinished Volumetric Construction

BENEFITS

NAFFCO'S modular units are suited for delivery of mass volume units of typical design prototypes for construction projects with tight execution deadlines and difficult site conditions.
